

# Front-end Guru

📅 January 2018

🕒 24-40 hours/week

📍 Rotterdam

## Introduction

52impact is a young company that develops information services based on satellite data, sensor technology and other geo-information. In addition, we also provide consultancy to tech companies in the geo and aerospace domains to help them with strategy, technology development, business analysis, positioning and the presentation and communication of complex information. What makes us unique is that we look at the business, communication and technical aspects of services. 52impact is therefore the link between technology and the market.

## About the job

We are looking for a front-end 'guru' who can work on both in-house product development as well as client projects. It will be your challenge to:

- Turn raw sketches and ideas into user-friendly, professional web applications and apps that are a pleasure to work with
- Bring static front-end demos to life
- Visualise and present complex (geo-)information in a clear and beautiful way

You will work on data-intensive applications where user-friendliness and a professional look-and-feel will have a great positive impact. Your work will really make people happy!

## Your profile

**University degree:** you preferably have an M.Sc. in a relevant technical discipline.

**Plenty of experience with web development:** you are an expert in HTML, CSS and JavaScript. In addition, you know how to work with modern frameworks like Angular and/or React.

**Basic knowledge of back-ends:** you are able to set up a simple back-end (server and database) and can connect back-end and front-end in your applications.

**Creative and eye for details:** you enjoy and know how to make user interfaces beautiful and pixel perfect.

The following experience will be helpful as well:

- Versioning and repositories (like Git)
- OpenLayers and/or other web mapping libraries
- Development of mobile apps
- Adobe InDesign, Adobe Illustrator/Inkscape

## What we offer you

At 52impact we offer you an extraordinary working environment. A chance to be part of the development of a new company with plenty of opportunities to grow. Since we are still small, you can really make a difference in reaching our goals. Does this appeal to you? Then there is more:

### Challenging business

Would you like to work on international challenges in the aerospace and geo domains? You don't have to be a rocket scientist to be able to do that. We are active in sectors that are inspiring and offer great opportunities for growth and development.

### Freedom and flexibility

At 52impact we have very flexible working hours and offer you a lot of freedom in terms of when and where you would like to work.

### Open and informal company culture

We greatly value an open, friendly and personal atmosphere. And we believe work should be fun, too! This means we go out for a drink regularly and there is always room for an informal talk on a personal level.

### Creating real impact

It's all in the name: at 52impact we want to create impact. We like to work on useful information services that bring added value to the quality and sustainability of our planet. Satellite data and sensor technology offer us an ever-growing set of possibilities to achieve that!

## Apply

Would you like to take on this challenge and become part of our company? And are you enthusiastic about our business and market domains?

Then please send your CV and a short motivation via email to [sabine@52impact.nl](mailto:sabine@52impact.nl) and maybe you will soon be part of our team!
